

Rappid®

Unique properties

- Polyphosphate with ammonium nitrogen
- Stimulate root growth.
- Enhance availability of soil phosphate for plants.
- It can move in soil while still in the soil solution.
- Enhance and stimulate the distribution of energy through the plant.
- Higher energy leads to more efficient resistance in plants.
- Rappid is a highly efficient phosphate source in high pH soils.
- Hydrolysis of polyphosphate to orthophosphate takes time in soil which stretches the availability period to plants.
- Should be applied during the vegetative growing phase of plants.
- Can be applied as a soil application or foliar application.
